🔄 SachinthaX

PROFILE

As a fourth-year Information Technology undergraduate at SLIIT University, I am a passionate Software Engineer specializing in full-stack web and mobile application development. My technical portfolio includes building robust platforms using the MERN stack, Java Spring Boot, and React Native. I have practical experience architecting secure backend APIs, designing responsive frontends, and integrating machine learning models into production-ready applications. Thriving in Agile, collaborative environments, I am seeking an entry-level software engineering role or internship to leverage my problem-solving skills and build scalable, user-centric software solutions.

EDUCATION

BSc (Hons) in Information Technology <i>SLIIT University, Sri Lanka Fourth-Year Undergraduate</i>	2022 – present
G.C.E. Advanced Level (Physical Science - Mathematics) <i>President's College, Minuwangoda</i>	2020

SKILLS

- **Programming Languages:** Java, Python, JavaScript, Kotlin, C/C++, PHP
- **Frontend & Mobile Development:** React.js, React Native (Expo), HTML5, CSS3, Tailwind CSS, Bootstrap, Redux Toolkit
- **Backend Frameworks & APIs:** Node.js, Express.js, Java Spring Boot, FastAPI, Java EE (Servlets/JSP)
- **Databases:** PostgreSQL, MongoDB (Mongoose), MySQL, SQLite (Room DB)
- **AI & Machine Learning:** Scikit-Learn, TensorFlow, Groq API (LLM Integration)
- **Tools & Security:** Git/GitHub, Postman, JWT, OAuth2, Android Studio, VS Code, Figma, Trello
- **Core Competencies:** Object-Oriented Programming (OOP), RESTful API Architecture, Full-Stack Development, Agile Methodologies, Quality Assurance

PROJECTS

Mushroom Cultivation App | *React Native, FastAPI, PostgreSQL, Scikit-Learn*

- Architected a full-stack environment monitoring subsystem for a mobile application, building a Python/FastAPI backend and a cross-platform React Native frontend.
- Engineered a predictive environmental forecasting engine using trained Machine Learning models (Scikit-Learn/TensorFlow) to predict temperature and humidity.
- Developed an AI-driven recommendation system (Groq API) that analyzes real-time environmental data against database ranges to generate automated corrective solutions.

Inspired Tech – E-Commerce Platform | *React, Redux Toolkit, Bootstrap*

- Spearheaded the frontend development of a dynamic shopping cart system using React and React-Bootstrap for a collaborative group project.
- Engineered global state management using Redux Toolkit to handle product additions, quantity updates, and cross-session data persistence via browser LocalStorage.
- Developed precision calculation utilities to handle dynamic shipping thresholds and taxes, specifically mitigating JavaScript floating-point math inaccuracies.

CookMate – Culinary Learning Platform | *Java Spring Boot, React.js, MongoDB, JWT/OAuth2*

- Built a scalable full-stack web application featuring structured step-by-step learning plans, user networking, and an integrated ChatBot assistant.
- Engineered a secure REST API with Spring Boot and MongoDB, featuring a clean MVC architecture with distinct Controller, Service, and Repository layers.
- Implemented a robust dual-method authentication system supporting both JWT-based local registration and OAuth2 third-party social logins.

EventEase – Event Management Platform | *MERN Stack (MongoDB, Express, React, Node.js)*

- Spearheaded the user management and authentication architecture for a full-stack event platform.
- Engineered a complete account lifecycle system featuring JWT-based security, email verification workflows, password recovery, and Google OAuth integration.
- Managed global frontend authentication state using the React Context API and configured Axios interceptors for secure, token-authenticated backend communication.

LANGUAGES

- English: Professional proficiency
- Sinhala: Native proficiency
